New Print Head Doctor Models 17 and 18 Unveiled

Mississauga, Ontario, Canada – Digital Sign Technologies Inc., a leader in print head recovery systems, is pleased to announce the release of two new models, the Print Head Doctor 17 (PHD17) and Print Head Doctor 18 (PHD18). These state-of-the-art models are set to revolutionize the industry with their advanced technology and unparalleled efficiency in maintaining and recovering print heads.

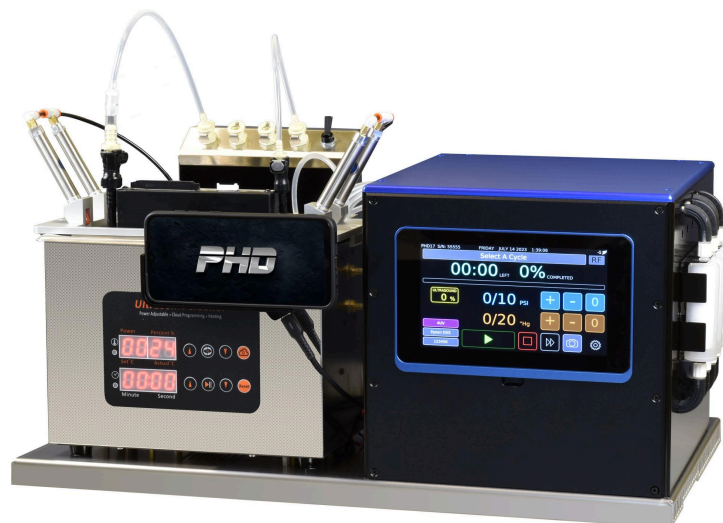

The PHD17 and PHD18 are designed to provide a second life to print heads, significantly reducing costs for businesses by avoiding the need for frequent replacements.

Users of older PHD models are offered paid upgrades to the latest features.

Print Head Doctor 17

The PHD17 is ideal for regular print head maintenance, unclogging severely blocked heads, and supporting all types of inkjet print heads, including UV, solvent, aqueous, and specialty ones. It automatically generates reports with photos of print head nozzle tests taken 'before' and 'after', allowing for full visibility of the print head recovery process. It is easy to use, fully automated, and remotely controlled.

The PHD17 is perfect for businesses with moderate maintenance needs, as it **can clean one or two print heads at a time.**

Print Head Doctor 18

For businesses with higher demands, the PHD18 offers a multi-head recovery system. It retains all the features of the PHD17 but extends its **capacity to clean up to ten print heads simultaneously**. This makes it the most efficient choice for companies requiring regular maintenance of multiple print heads.

Experience a live demo at our booth SL7259 at Printing United Expo, Las Vegas Convention Center, September 10-12, 2024. [Register for FREE](#).
